TRANSITOS SOLARES DE VENUS Y LOS 5 ALIMENTOS

Diego Santanna de Landa

Los alimentos de los 5 soles y el ciclo de transitos de venus de 243 años

He calculado la media de los alimentos de los 4 soles de las 4 primeras listas (donde se distancian en años sidereos completos y como la misma posicion de venus son ciclos sinodicos completos tambien son años sidereos de venus completos) dando en el limite preterito-1586 26 antes que el limite preterito del quinto arriba a la izquierda de las 4 segundas listas si uno de los cuatro lo avanzamos los 104x365 de chequeo de la posicion de venus tendria -1560 (en la lista b1561) si mirais la 1º tabla abajo a la izquierda tenemos el limite futuro 104x365 avanzado de lo que serian los 2808x365 por eso los limites futuros su media es 1246 que es limite futuro del alimento del quinto sol.

Ademas -690 y 752 su media es 243x5 años antes que 1246 y la media de 2039 y 2883 es 243x5 años despues de 1246. Como 243 años (243x365+61) separa transitos de venus en la series aportadas por la nasa comprobe cuanto tiempo se diferencia los transitos de las fechas de las listas . Los numeros en rojo son años antes coincidiendo con transito y en azul despues cuando en la conjuncion superior (los recuadros centrales)

Cuando tenemos venus delante de sagitario y tauro nos acercamos a un transito y observe una simetria entre las listas que terminan en 2039 y 2883 en la lista del quinto sol consigo misma y en los que terminan en -690 y 752 la posicion es simetrica pero hay una diferencia de 8 años aunque segun mi programa en -2249 nov es un transito perdido (es decir venus viaja muy cerca del contorno del sol) por lo que no habria diferencia de 8 años
2249 mas 183 = 1625 mas 807 es -2432 1052 mas 1376 = 428 mas 2000 es 2428
y 311 menos 313 de la lista (303 menos 305 de transitos) es -2 y dentro de cada lista 2249-1625=807-183=1052-428=2000-1376=311+313=624 cuentas de 365 que siempre se refieren a

transitos separados 607.5 años (5/2 de 243) 2x624x365 son 61 dias mas que 780 ciclos sinódicos de venus y 2628 estaciones de eclipse y 63 dias mas que 1247 años trópicos. . En las segundas 4 listas ademas del quinto sol estan los alimentos de los 3 casos en que el nombre del aliemnto se da dos veces en el año correspondiente por sol en los que ya no hay estas relaciones para empezar ya no tenemos distancias de años sidereos completos.

1 pedernal 98º 2º alimento

el alimento del 5º sol arriba a la izquierda tambien tiene los mismos fondos estelares de venus eso es las cronodistancias son enteros de año sidereo de venus sinodico y por tanto de venus sidereo
pero ademas de estos 5 alimentos uno por cada sol en tres de ellos hay en el mismo año otro alimentn arriba a la derecha el otro alimento 160º desplaza la lista de fechas hacia el futuro teniendo practicamente a continuacion la lista de fechas para el elimento 25º a principios de era gregoriana . los otros dos alimentos son 72º y 98º en el de 98º abajo a la derecha la lista de fechas retrocenden solapandose con la lista del alimento del 5º sol y en el de 72º abajo a la izquierda la lista avanza tambien solapandose con la lista del alimento del 5º sol
